Reasons For Allowance

The prior art of record does not disclose or fairly suggest a method for treating tissue in the nasopharynx, oropharynx or larynx with radio frequency energy wherein the treatment area is isolated from the trachea and lungs, for example by an inflatable balloon or cuff, to provide a fluid-tight seal, delivering an electrically conductive fluid to the space, positioning an active electrode near the tissue to be treated and applying radio frequency voltage to the electrode, the conductive fluid providing the conduction path to a return electrode. Treating tissue with radio frequency energy is well known. Containing an area in a lumen with inflatable balloons is also known, as for example U.S. Patent 5,562,608 to Sekins et al., however, the area cited is in the lungs and no radio frequency is used. The unique characteristics of the larynx area, wherein any fluid must be kept from the lungs and stomach, make the method steps unique to the treatment area.

Conclusion
